Document Change Record

This page records changes to this document. The document was originally released as Revision 001.

Version Number	Date	Description of Change
003	4/2010	Added new CDMA radio activation procedures.
002	2/2010	Revised to support the new EA11 imager, 2.5G GPRS/EDGE radio, and increased RAM memory.

Before You Begin

This section provides you with safety information, technical support information, and sources for additional product information.

Safety Information

Your safety is extremely important. Read and follow all warnings and cautions in this document before handling and operating Intermec equipment. You can be seriously injured, and equipment and data can be damaged if you do not follow the safety warnings and cautions.

This section explains how to identify and understand warnings, cautions, and notes that are in this document.

A warning alerts you of an operating procedure, practice, condition, or statement that must be strictly observed to avoid death or serious injury to the persons working on the equipment.

A caution alerts you to an operating procedure, practice, condition, or statement that must be strictly observed to prevent equipment damage or destruction, or corruption or loss of data.

Note: Notes either provide extra information about a topic or contain special instructions for handling a particular condition or set of circumstances.

Global Services and Support

Warranty Information

To understand the warranty for your Intermec product, visit the Intermec web site at **www.intermec.com** and click **Support** > **Returns and Repairs** > **Warranty**.

Disclaimer of warranties: The sample code included in this document is presented for reference only. The code does not necessarily represent complete, tested programs. The code is provided "as is with all faults." All warranties are expressly disclaimed, including the implied warranties of merchantability and fitness for a particular purpose.

Web Support

Visit the Intermec web site at **www.intermec.com** to download our current manuals (in PDF).

Visit the Intermec technical knowledge base (Knowledge Central) at **www.intermec.com** and click **Support** > **Knowledge Central** to review technical information or to request technical support for your Intermec product.

Telephone Support

In the U.S.A. and Canada, call **1-800-755-5505**.

Outside the U.S.A. and Canada, contact your local Intermec representative. To search for your local representative, from the Intermec web site, click **About Us** > **Contact Us**.

Service Location Support

For the most current listing of service locations, go to **www.intermec.com** and click **Support** >**Returns and Repairs** > **Repair Locations.**

For technical support in South Korea, use the after service locations listed below:

AWOO Systems
102-1304 SK Ventium
522 Dangjung-dong
Gunpo-si, Gyeonggi-do Korea, South 435-776
Contact: Mr. Sinbum Kang

Who Should Read This Manual

This manual is for the person who is responsible for installing, configuring, and maintaining the CN50 Mobile Computer.

This manual provides you with information about the features of the CN50, including how to install, configure, operate, maintain, and troubleshoot it.

Before you work with the CN50, you should be familiar with your network and general networking terms, such as IP address.

Related Documents

The Intermec web site at **www.intermec.com** contains our documents (as PDF files) that you can download for free.

To download documents

1. Visit the Intermec web site at **www.intermec.com**.
2. Click the **Products** tab.
3. Using the **Products** menu, navigate to your product page. For example, to find the CN50 computer product page, click **Computers** > **Handheld Computers** > **CN50**.
4. Click the **Manuals** tab.

If your product does not have its own product page, click **Support** > **Manuals**. Use the **Product Category** field, the **Product Family** field, and the **Product** field to help you locate the documentation for your product.

Patent Information

Product is covered by one or more of the following patents:

4953113; 4961043; 4970379; 4988852; 5019699; 5021642; 5038024; 5081343; 5095197; 5144119; 5144121; 5182441; 5187355; 5187356; 5195183; 5216233; 5216550; 5218191; 5227614; 5233172; 5241488; 5243602; 5258606; 5278487; 5288985; 5308966; 5322991; 5331136; 5331580; 5342210; 5349678; 5359185; 5371858; 5373458; 5389770; 5397885; 5410141; 5414251; 5416463; 5442167; 5464972; 5468947; 5468950; 5477044; 5486689; 5488575; 5500516; 5502297; 5504367; 5508599; 5514858; 5530619; 5534684; 5536924; 5539191; 5541419; 5548108; 5550362; 5550364; 5565669; 5567925; 5568645; 5572007; 5576529; 5592512; 5594230; 5598007; 5608578; 5616909; 5619027; 5627360; 5640001; 5657317; 5659431; 5671436; 5672860; 5684290; 5719678; 5729003; 5742041; 5761219; 5764798; 5777308; 5777309; 5777310; 5786583; 5793604; 5798509; 5798513; 5804805; 5805807; 5811776; 5811777; 5818027; 5821523; 5828052; 5831819; 5834749; 5834753; 5837987; 5841121; 5842070; 5844222; 5854478; 5862267; 5869840; 5873070; 5877486; 5878395; 5883492; 5883493; 5886338; 5889386; 5892971; 5895906; 5898162; 5902987; 5902988; 5912452; 5923022; 5936224; 5949056; 5969321; 5969326; 5969328; 5979768; 5986435; 5987192; 5987499; 5992750; 6003775; 6012640; 6016960; 6018597; 6024289; 6034379; 6036093; 6039252; 6064763; 6075340; 6095422; 6097839; 6102289; 6102295; 6109528; 6119941; 6128414; 6138915; 6149061; 6149063; 6152370; 6155490; 6158661; 6164542; 6164545; 6173893; 6195053; 6234393; 6234395; 6244512; 6249008; 6328214; 6330975; 6345765; 6356949; 6367699; 6375075; 6375076; 6375344; 6431451; 6435411; 6484944; 6488209; 6497368; 6532152; 6538413; 6539422; 6621942; 6641046; 6681994; 6687403; 6688523; 6732930; 6859190; 6889903; 6967280; 7027037; 7035466; 7090137; 7121467.

There may be other U.S. and foreign patents pending.

1
Using the Computer

This chapter introduces the CN50 Mobile Computer with Windows® Mobile® 6.1 and contains these topics:

- **Introducing the CN50 Mobile Computer**
- **Using the Battery**
- **Using the Keypad**
- **Adjusting the Volume of the CN50**
- **Using the Touch Screen**
- **Understanding the Status LEDs**
- **Using the Imager**
- **Using the Color Camera**
- **Using a microSD Card**
- **Enabling the Integrated GPS on the CN50**

Introducing the CN50 Mobile Computer

The Intermec CN50 Mobile Computer is a small, sleek, and stylish mobile computer built on the Microsoft® Windows® Mobile 6.1 operating system. The CN50 uses dual ARM processors to provide high throughput and is the only mobile computer with the latest High Speed Uplink Packet Access (HSUPA). The CN50 is also the first voice-enabled mobile computer that can be changed from a CDMA network to a GSM/UMTS network and back to CDMA.

CN50 Mobile Computer

Here are more great features of the CN50:

- A digital compass to enhance GPS navigation and improve geotagging of captured images.
- An accelerometer that can automatically sense the angle of the computer and rotate the display between portrait and landscape.
- The first 3 megapixel camera in a mobile computer.
- An area imager that supports reading bar codes, signature capture, and Enhanced Mobile Document Imaging (eMDI).

The CN50 Mobile Computer with an IEEE 802.11b/g radio installed is Wi-Fi® certified for interoperability with other 802.11b/g wireless LAN devices.

The CN50 is available with the following features:

- 3.75G UMTS/3.5G CDMA, 802.11b/g, and Bluetooth® radio
- 2.5 GPRS/EDGE radio
- 256 MB DRAM, 512 MB Flash (approximately 350 MB free for user applications)
- Customer-accessible micro-SD slot for removable memory cards up to 32 GB
- Alphanumeric or numeric keypad
- Imaging options:
  - EA21 area imager
  - EA11 area imager
- GPS receiver

Use this manual to understand how to use the CN50 and other features and options available on it. For information about Windows Mobile 6.1 applications installed on the CN50, refer to the online help.

Using the Battery

The CN50 uses an AB24 standard battery or an AB25 extended battery as its main power source. The standard battery has a 7.2 Watt hour capacity, and the extended battery has a 14.4 Watt hour capacity. Several factors determine the life of your battery, such as display brightness, display timeout, input devices, extreme temperatures, and your usage.

You should fully charge the battery before you use the CN50. When you change the battery, it will automatically go into a power off state and then cold boot.

The battery used in this device may present a fire or chemical burn hazard if it is mistreated. Do not disassemble it, heat it above 100°C (212°F) or incinerate it. Dispose of used batteries promptly. Keep away from children.

Note: If the CN50 is not using external power and you remove the battery pack, the CN50 goes into a power off state.

For replacement batteries, contact your Intermec representative.

Charging the Battery

Make sure you fully charge the AB24 or AB25 battery before you use your CN50. You can charge the battery before or after you install it in the CN50. A fully discharged battery charges in approximately 4 (AB24) to 6 (AB25) hours.

To charge the battery

- Insert up to four batteries into the AC21 quad battery charger.
- Install the battery in the CN50 and insert the CN50 into the AD23 charge-only multidock or AD24 Ethernet multidock.
- Attach an AE37 AC adapter or AE36 vehicle power adapter.

Use the next table to understand how long it takes to charge your batteries in each of the CN50 charger or dock accessories.

Charging Times for CN50 Batteries

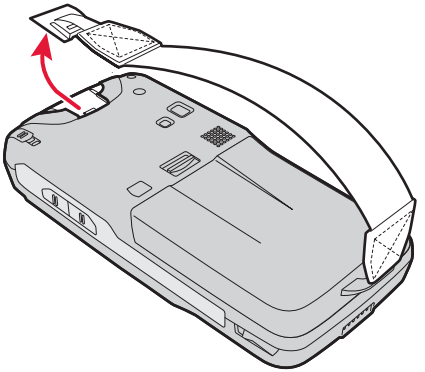
CN50 Charging Accessory	AB24 Charging Time	AB25 Charging Time
AC21 quad battery charger	4 hours	6 hours
AD23 charge-only multidock	4 hours	6 hours
AD24 Ethernet multidock	4 hours	6 hours
AE36 vehicle power adapter	4 hours	6 hours
AE37 AC adapter	4 hours	6 hours

Removing and Installing the Battery

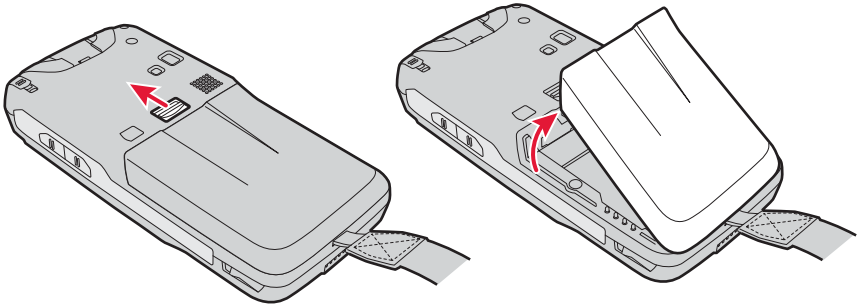
The CN50 resets when you remove the battery.

To remove and install the battery

1. Save your files and close any open applications.
2. Press and hold ⏻ for about 2 seconds. When you release ⏻, the CN50 goes into suspend mode.
3. If necessary, disconnect the handstrap from the top of the CN50.



4 Push forward on the battery release tab until the battery releases, and then lift it away from the CN50.



5 Insert the bottom of a fully charged battery into the CN50, and press down on the top until it clicks into place.

6 If necessary, replace the handstrap.

Maximizing Battery Life

Batteries are chemical devices. If the batteries are left sitting on a shelf for long periods of time outside the CN50, the batteries slowly discharge, eventually to zero if left uncharged. The battery chemistry resists normal degradation if you store the battery in a charger as opposed to leaving the battery in a discharged state. See the following table for tips to maximize the life of your battery.

Battery Conservation Tips

When You Want To:	Do This to Save Battery Power:
Operate the CN50 and the Low Battery status icon appears or the Battery light comes on.	Save your data and then go to **Start** > **Programs** > **Shut Down**. After the CN50 shuts down, remove the battery and insert another fully charged battery. Or, you can connect the CN50 to an external power source.
Stop using the CN50 for 5 minutes or longer.	Make sure the low battery icon is not on the screen and that the Battery light is not turned on. Press ⏻ to suspend the CN50.
Store the CN50 for more than a day.	If you are storing the CN50 for a few days, such as over the weekend, install the charged battery or attach the CN50 to a power source. If you are storing the CN50 for longer, remove and charge the battery, then store both the battery and the CN50 in a cool location. If the battery in storage is not used in several months, you should recharge the battery to keep it at its performance peak.
Store the battery outside the CN50.	Store the batteries in a charger connected to power.

Checking the Battery Status

The easiest way to check the status of your battery is to look at the battery icon on the status bar of your CN50.

Battery Icon Status

Icon	Status
	Battery is fully charged.
	Battery has a medium charge. You should be able to work for several more hours before changing batteries.
	Battery is low. You need to charge or replace the battery soon.
	Battery is critically low. You need to replace the battery now.
	Battery is charging.

Location of the Battery Status LED

The Battery Status LED above your CN50 display indicates the charging status of your battery.

Understanding the Battery Status LED

LED State	Description
Steady green when the CN50 is connected to external power	The battery is fully charged.
Blinking red	The battery is low. CN50 goes into Suspend mode. Charge or replace the battery.
Steady red when the CN50 is connected to external power	The battery is charging.
Steady amber	There is a battery error. The battery may be outside the allowable charging temperature or you may need to replace the battery.
Off	The CN50 is not on external power and the battery is operating normally.

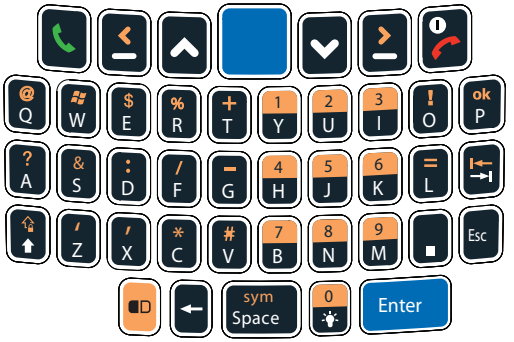
Using the Keypad

Use the following sections to understand how to use the keypad. For information on remapping the keypad, you can download the Device IDL Resource Kit from the Intermec web site at **www.intermec.com/idl**.

The CN50 comes with either a numeric keypad or a QWERTY keypad. The QWERTY keypad is designed for applications that require primary input of alphabetic data. This keypad also provides special characters, numbers, symbols, and functions by pressing color-coded key sequences.

The numeric keypad is for applications that require mainly numeric data. This keypad also lets you enter special characters, including the alphabet, by pressing color-coded key sequences.

CN50 Numeric Keypad



CN50 QWERTY Keypad

Using the Power Button

When you press and hold the **Power** button (), you put the CN50 into suspend mode. In this lower power mode, the CN50 continues to supply power to all memory, but turns off power to most hardware such as the display. This power-saving feature is designed to prolong battery life.

Using the Color-Coded Keys

Each keypad provides color-coded keys to let you access additional characters, symbols, and functions printed on the keypad overlay. Once you understand how to use the color-coded keys and key sequences, you can access all of the additional features printed on the keypad overlay.

There are two color-coded modifier keys on the numeric keypad: the orange key and the green key. There is one orange color-coded modifier key on the QWERTY keypad.

Using the Color-Coded Keys

You Want to:	Press:	Example
Use an orange character or function printed above a key.	key (LED turns on) and then the key with the character or function printed above it.	On the CN50 QWERTY keypad, press and then to select the key.
Use a green character or function printed above a key.	key (LED turns on) and then the key with the character or function printed above it.	On the CN50 numeric keypad, press and then to select the function.
Lock the green key to stay on.	once.	On the CN50 numeric keypad, press once. The green LED turns on and stays on.
Lock the orange key to stay on.	twice.	On the CN50 QWERTY keypad, press twice. The orange LED turns on and stays on.
Unlock the green or orange key.	or once.	Press or once to unlock the key. The LED turns off.

Capitalizing Characters

You can capitalize characters individually, or you can type all capital letters by enabling Caps Lock.

To capitalize a single character

- On the QWERTY keypad, press the ⇧ key, and the character.
- On the numeric keypad, press the Blue key, and then the 1 key. Select the key with the letter you want to capitalize. Press 1 again to return to lowercase letters.

To enable Caps Lock

- On the QWERTY keypad, press Alt, then the ⇧ key. Press Alt again to disable the Caps Lock.
- On the numeric keypad, press Blue 1.

To disable Caps Lock

- On the QWERTY keypad, press the Alt key again.
- On the numeric keypad, press 1 again.

For information on how to enter specific characters with keystrokes, see Appendix C, **"Keypads and Keystrokes" on page 79.**

Entering Letters With the Numeric Keypad

To enter letters on the numeric keypad, you need to press the Blue key and the number key as many times as necessary to access the letter you need since each number key has one to four letters or functions.

For example, to type a lowercase z

- Press Blue 9 9 9 9.

Adjusting the Volume of the CN50

You can adjust the computer volume for your needs and your environment. The volume includes sounds you hear when you tap the screen or scan bar codes with a scanner. You can set the volume to off, very low, low, medium, high, very high (default), and vibrate.

You can use the Volume application (available from the navigation bar) or the Volume buttons (on the side of the CN50) to change the volume of the computer.

Location of Volume Buttons on the CN50

To adjust the volume with the Volume application

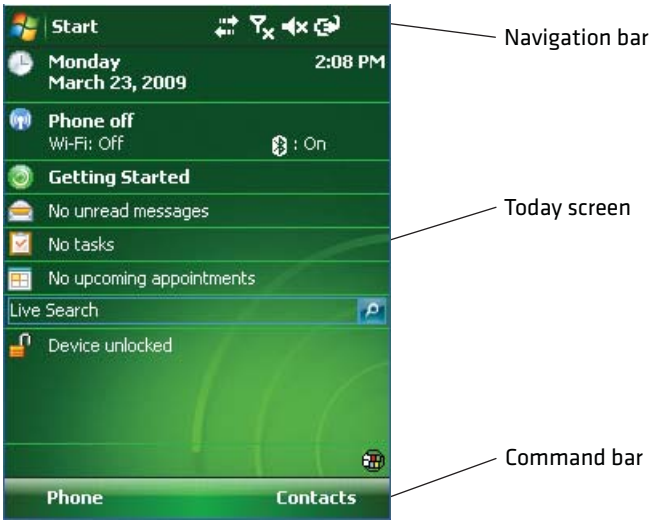
1. Tap the Volume ( ) icon at the top of the screen.
2. Use your stylus to adjust the volume slider to the volume you want, select **Vibrate,** or select **Off**.

To adjust the volume with the Volume buttons

- Press the upper side button to increase the volume.
- Press the lower side button to decrease the volume, set the volume to vibrate, or turn the volume off.

Using the Touch Screen

The CN50 has a 240 x 320 pixel color touch screen display. The Windows Mobile 6.1 start screen has three distinct areas: the navigation bar, Today screen, and command bar.



Windows Mobile 6.1 Start Screen

To turn the screen backlight on and off

- For the numeric keypad, press .
- For the QWERTY keypad, press .

Configuring the Backlight Settings

By default, the CN50 goes into Screen Off mode when there is no activity on the computer. Screen Off mode turns off the backlight and display. Press a key or tap the screen to resume activity.

To configure the backlight

1. Tap **Start** > **Settings** > the **System** tab > the **Backlight** icon > the **Battery Power** tab.
2. With **Turn off backlight if device is not used for** checked, select the timeout value (30 seconds, or 1 to 5 minutes).

Using the Stylus

Your computer has a stylus for selecting items and entering information on the touch screen.

Functions You Can Perform With the Stylus

Action	Description
Tap	Touch the screen once with the stylus to select options, open or close applications, or launch menus from the Command bar.
Drag	Hold the stylus on the screen and drag across the screen to select text and images.
Tap and hold	Tap and hold the stylus on an item to see a menu of actions available for that item. On the pop-up menu that appears, tap the action you want to perform.

Understanding the Screen Icons

Use the screen icons on the navigation bar and the command bar to see the network connection status and other system information. For information about the battery icons, see **"Checking the Battery Status" on page 6.** Some standard Microsoft icons are included in this table.

Screen Icons

Icon	Description
	The volume is turned off. To turn the volume back on, tap this icon and choose your setting.
	The computer is connected to the network.
	The computer is not connected to the network.
	The 802.11 radio is connected to the wireless network.

Aligning the Touch Screen

If the touch screen does not respond when you tap it with the stylus, you may need to calibrate the screen. Before you calibrate the touch screen, make sure the CN50 screen is unlocked.

To calibrate the touch screen

1. Tap **Start** > **Settings** > the **Systems** tab > **Screen**.

Note: If the touch screen is so out of alignment that you cannot open the **Start** menu, you can try to align the screen menu using the keypad. For help, see the next procedure.

2. Tap **Align Screen** and follow the instructions to align the screen.
3. Click **ok**.

If the touch screen is so out of alignment that you cannot open the Start menu, you may need to align the screen menu using only the keypad.

To align the touch screen using the keypad

1. Press Fn W (for the Start menu ⊞).
2. Press ▼ to select **Settings** and then press Enter.
3. Press Ctrl Tab until the Personal tab is selected.
4. Press Fn Tab to select the System tab.
5. Use the arrow keys to choose **Screen** and then press Enter.
6. Tab to **Align Screen** and press Enter.
7. Follow the instructions to align the screen.
8. Tap **ok**.

If you are unable to align the touch screen, you may need to cold boot the CN50. For help, see **"Cold Booting the CN50" on page 60.**

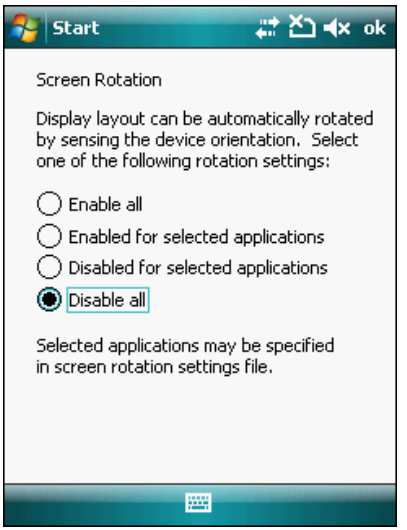
Rotating the Screen

The internal accelerometer enables you to have the screen rotate by sensing the orientation of the CN50. You can enable the screen to rotate all the time depending on orientation, you can enable it to rotate for specific applications, you can disable rotation for selected applications, or you can disable it.

Note: By default, when you select "Enabled for selected applications," rotation is only enabled for Internet Explorer and Windows Media Player.

To configure the screen rotation

1 Tap **Start** > **Settings** > the **Systems** tab > **Sensors**.



Start
ok
Screen Rotation
Display layout can be automatically rotated by sensing the device orientation. Select one of the following rotation settings:
Enable all
Enabled for selected applications
Disabled for selected applications
Disable all
Selected applications may be specified in screen rotation settings file.

2 Select the option you want to use.

You can modify the screen rotation settings file to determine which applications will enable or disable screen rotation by modifying the settings.csv file in the \Windows folder.

Understanding the Status LEDs

The CN50 has four status LEDs.

Location of the CN50 Status LEDs

The next table describes the notification LED, good read LED, and key status LED. For information about the battery status LED, see **"Understanding the Battery Status LED" on page 7.**

Understanding the Status LEDs

LED	Color	Description
Notification	Orange	The CN50 is notifying you of a pending alarm or message.
Good Read	Green	The CN50 has successfully decoded a bar code.
Battery		See **"Checking the Battery Status" on page 6.**
Key Status	Green	Caps Lock is enabled if you have a QWERTY keypad. Green function keys are enabled if you have a numeric keypad.
	Amber	Amber function keys are enabled.

Using the Imager

The CN50 has two available area imagers, shown in the next table with the minimum bar code size supported by each imager.

Minimum Bar Code Sizes

Imager	1D	2D
EA11	5 mil	5 mil
EA21	6 mil	10 mil

The area imagers can perform these tasks:

- Read bar codes, including 1D, 2D, and composite symbologies and postal codes. For more information, see the next section, "Reading Bar Codes."
- Capture signatures. Use the imager to "photograph" signatures on business forms, or to capture onscreen signatures or line drawings. For more information, see **"Capturing a Signature" on page 19.**
- EA21 only: Document imaging of full business forms such as bills of lading or invoices. For more information, see **"Capturing a Document" on page 19.**

Reading Bar Codes

The CN50 ships with an internal imager to read and enter bar code data. By default, these bar code symbologies are enabled on the CN50:

- Code 39
- Code 128/GS1-128
- DataMatrix
- PDF417
- EAN/UPC

If you are using bar code labels that are encoded in a different symbology, you need to enable the symbology on the CN50. To easily enable or disable symbologies, read one of the bar codes in the table called **"Symbology Bar Codes" on page 87.**

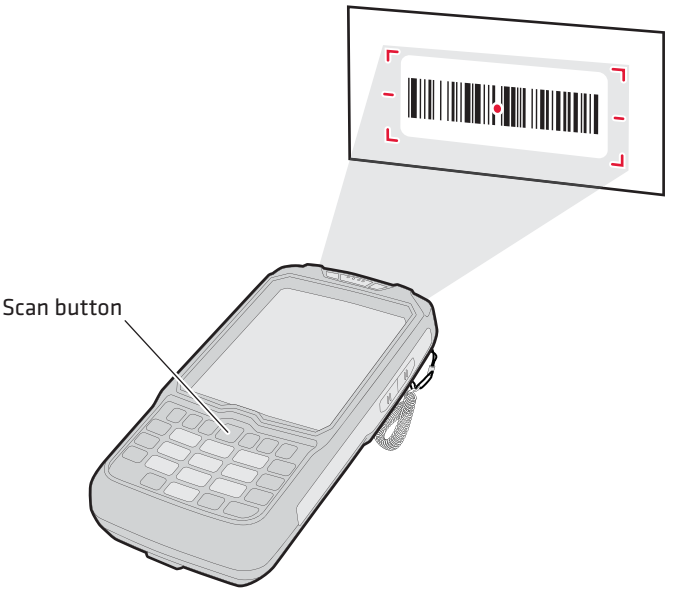
You can use EasySet to create configuration bar codes specific to your system. You can download a free copy of EasySet from the CN50 page on the Intermec web site at **www.intermec.com**.

To develop an application you can use to configure the imager, use the Data Collection Resource Kit. The resource kit is part of the Intermec Developer Library (IDL) and can be downloaded from the Intermec web site at **www.intermec.com/idl**.

The area imager is equipped with a laser pointer to help you aim at bar codes, allow you to read 2D bar code symbologies, and support omni-directional (360°) scanning. Omni-directional scanning lets you position the CN50 in any orientation to read a bar code label.

To read a bar code

1. Press ⏻ to turn on the CN50.
2. Point the scanner window at the bar code label, and hold the CN50 steady a few inches from the label.
3. Press the **Scan** button. The laser pointer and illumination beam and frame appear.



4 Use the laser pointer as a guide and aim toward the middle of the bar code. Make sure that the illumination frame covers the bar code you are trying to decode.

   When the CN50 successfully reads a bar code label, you hear a high beep, and the Good Read LED turns on briefly.

5 Release the **Scan** button.

Capturing a Signature

A signature capture is a grayscale image of a signature on paper or other business form. To use signature capture in your applications, use the SignatureCapture components in the Data Collection Resource Kit.

Ink capture is the process of saving an onscreen image, such as a signature or simple line drawing, to a file. To use ink capture in your applications, use the InkCapture components in the Mobile Gadgets Resource Kit.

Both Resource Kits are part of the Intermec Developer Library (IDL) which you can download from the Intermec web site at **www.intermec.com/idl.**

Capturing a Document

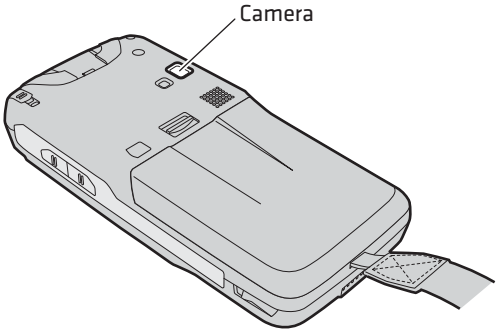
Intermec Enhanced Mobile Document Imaging (eMDI) is an image capture application that enables users to capture document images while in the field. This applications is only supported on the CN50 with an EA21 imager. Using the CN50, eMDI allows you to convert paper documents into document images that are saved on your mobile computer.

eMDI streamlines back-office operation and reduces data entry time because document images can be transmitted from the field to backoffice applications over wireless networks. With this, customer service and other staff gain real-time access to document images, via their enterprise systems, which can be used to answer customer queries, issue invoices, and update records.

You can download a full version of eMDI from the CN50 page on the Intermec web site at **www.intermec.com**. The eMDI application will place an "Intermec Demo" watermark on the captured documents until you purchase the eMDI Client Software License (P/N 454-025-001). For more information, contact your local Intermec representative. For more information on eMDI, see the ***Intermec Enhanced Mobile Document Imaging User's Guide***.

Using the Color Camera

The high-quality 3.15 megapixel color camera with flash is a standard feature of the CN50. You can take photos in high, normal, or low quality, with image sizes up to 2048 x 1536 pixels. When you take a picture, the images are saved as .jpg files and stored in the /My Documents/My Pictures folder.



Location of the CN50 Color Camera

You can use the Pictures & Videos application on the CN50 to take, view, and edit pictures or record and launch video clips stored on the CN50 or a storage card. You can also send pictures and video clips to others or save an image as the background on the Today screen.

After you have opened up the camera application, you can configure camera options by tapping **Menu**.

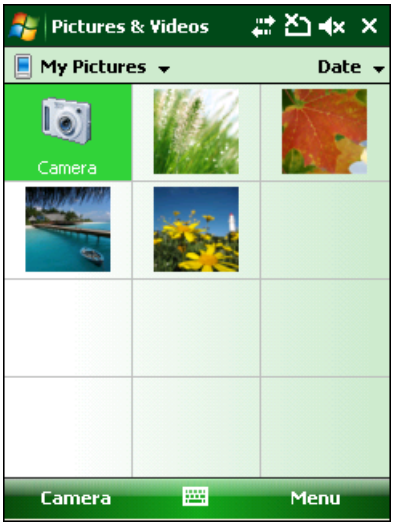
You can zoom in or out on an image while using either camera mode or video mode.

To zoom in or out on an image

- Press ⌃ to zoom in and press ⌄ to zoom out.

To take a picture with the camera

1. Tap **Start** > **Programs** > **Pictures & Videos**.
2. Tap the **Camera** icon in the grid, or tap **Camera** on the taskbar.



3. Using the screen as a viewfinder, move the camera until you have the image you want to capture.
4. Tap **Take Pic** on the taskbar or press **Enter** to save the image. If you select to save your pictures to Main memory, they are saved to permanent storage on the CN50.

To switch to Video mode

- Tap **Menu** > **Video Mode**.

The camera icon below the screen turns into a video camera and **Record** now appears in the taskbar.

To set options for saving pictures

1. From the Pictures & Videos application, tap **Menu** > **Settings**.
2. Set these options:
   - (Optional) A filename prefix. The default prefix is .img.
   - Where you want to save picture files.
   - The still image compression level.

3 Click **ok**.

You can also set options for flash, video, quality, and some advanced options from the Settings menu.

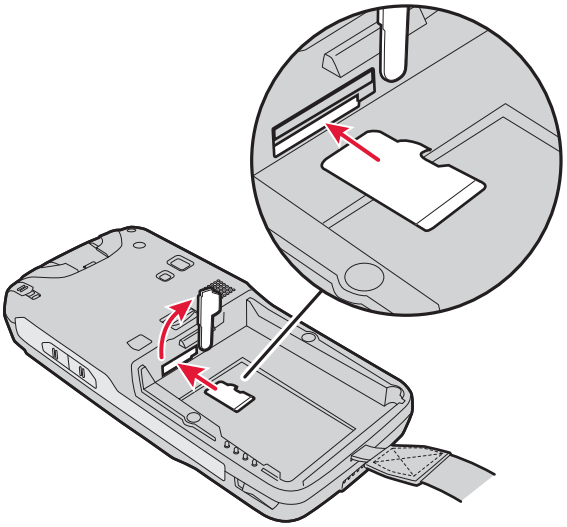
Using a microSD Card

You can use a micro Secure Digital (SD) card to increase file storage and install software. The CN50 supports an optional 32 GB maximum capacity microSD™ card. The microSD card slot is located in the battery compartment.

To install a microSD card

1 Remove the battery. For help, see **"Removing and Installing the Battery" on page 4.**

2 Swing the card access door clockwise to expose the SIM card and microSD card slots.



3 Insert the microSD card in the bottom slot and push in with the stylus (or similar tool) until it clicks into place.

4 Install the battery.

5 Press ⏻ to turn on the CN50:

You should be able to navigate to the Storage Card folder and see the contents of the microSD card.

For troubleshooting information, see **"Troubleshooting the CN50" on page 55.**

Enabling the Integrated GPS on the CN50

The CN50 comes equipped with an integrated Global Positioning System (GPS) receiver. It can deliver standards-based National Marine Electronics Association (NMEA) data strings to GPS applications. Intermec recommends that you use the GPS Intermediate Driver (GPSID) instead of directly accessing the GPS hardware. The GPSID is a Microsoft software component that interacts between applications and the GPS hardware.

Using the GPSID allows Intermec support for Extended Ephemeris, which enhances GPS performance by:

- reducing the amount of time it takes your GPS receiver to acquire a fix.
- eliminating the need to obtain precise satellite data information from the GPS satellites.

And, as a Microsoft software component, the GPSID also provides these benefits:

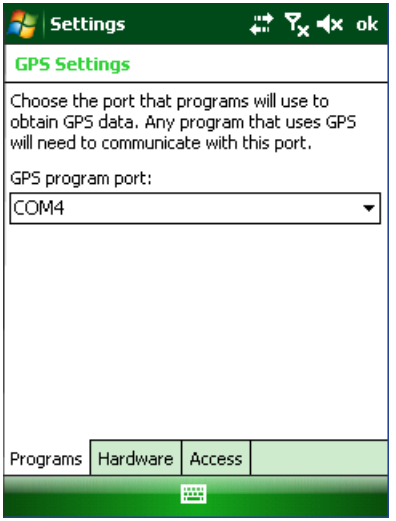
- Allows multiple applications to simultaneously access the GPS data stream.
- Provides access to GPS data without requiring applications to recognize and parse NMEA syntax.

Using the GPSID Installed on the CN50

To use the GPSID installed on your CN50, you need to configure the GPSID settings.

To configure your GPSID settings

1. Tap **Start** > **Settings** > the **System** tab.
2. Tap **External GPS**. The GPS Settings screen appears.

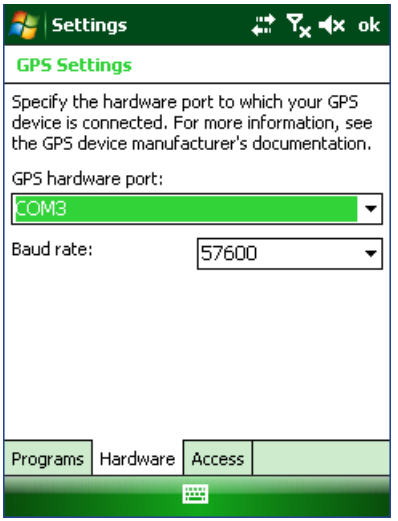


3 On the **Programs** tab, select the COM port that you want your programs to use to get GPS data from your CN50.

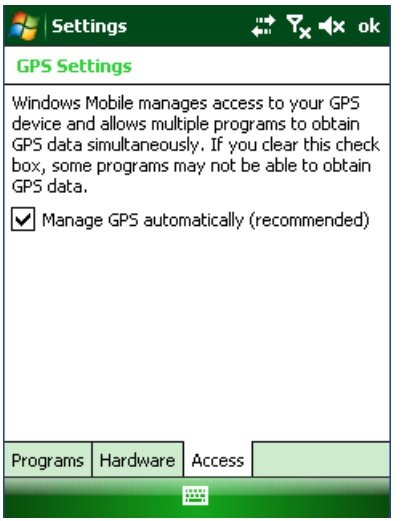
4 Tap the **Hardware** tab, and confirm these default settings.

GPS hardware port: COM3

Baud rate: 57600



5 Tap the **Access** tab and select the **Manage GPS automatically** check box.



Settings
ok
GPS Settings
Windows Mobile manages access to your GPS device and allows multiple programs to obtain GPS data simultaneously. If you clear this check box, some programs may not be able to obtain GPS data.
Manage GPS automatically (recommended)
Programs
Hardware
Access

6 Tap **ok**.

Improving GPS Performance on the CN50

The integrated CN50 GPS module has three operating modes:

- Standalone-GPS
- Assisted GPS
- gpsOneXTRA

In Standalone mode, the CN50 GPS module relies solely on GPS satellites to determine position.

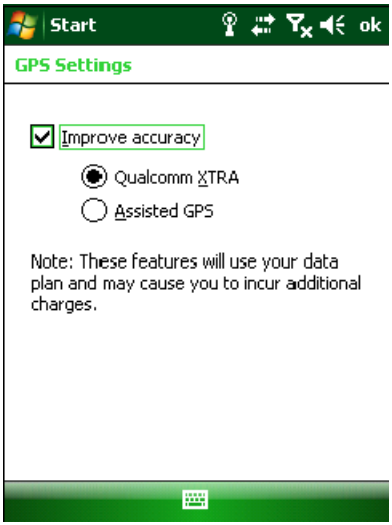
In Assisted GPS mode, the CN50 can determine position without receiving GPS signals directly from satellites; instead, the CN50 receives GPS signals and information provided by the cellular network. Even when the CN50 can receive a satellite signal, Assisted GPS can improve position accuracy and reduce the time to determine initial position (Time-To-First-Fix). Check with your cell phone carrier for availability and pricing for Assisted GPS service.

Qualcomm's gpsOneXTRA Assistance technology provides enhanced operation for Standalone-GPS. This option enables the CN50 to automatically download a small assistance data file from the XTRA servers through a brief internet access session.

To improve GPS performance

1 Tap **Start** > **Settings** > **Systems tab** > **GPS Settings**.

2 Select **Improve accuracy** and choose an operating mode.



Learning About Additional GPS Options for the CN50

Intermec provides enhanced feature support for the Extended Ephemeris data capability. For more information about programming for Extended Ephemeris GPS, visit the Intermec Developer Library at **www.intermec.com/idl**.

2

Connecting and Configuring the CN50

Use this chapter to understand how to configure the CN50 to communicate in your network. This chapter contains these topics:

- **Configuring the CN50**
- **Managing the CN50 Using SmartSystems**
- **Connecting the CN50 to a PC**
- **Connecting the CN50 to Your Network**
- **Configuring the Phone**
- **Connecting to an ISP**
- **Connecting to a Network With a VPN Server**

Configuring the CN50

You can configure many parameters on the CN50 such as the bar code symbologies it decodes or the network settings. These characteristics are controlled by configuration parameters. The values you set for these configuration parameters determine how the CN50 operates.

There are several ways to configure the CN50:

- You can use the Scan-to-Connect utility, which is part of SmartSystems Foundation, to quickly provide the CN50 with the minimal information necessary to connect to a secure network. For more information, see the next section **"Managing the CN50 Using SmartSystems."**
- You can use a third party device management product that supports the CN50, such as the Microsoft System Center Mobile Device Manager. For more information, visit the Microsoft website at **http://msdn.microsoft.com/en-us/default.aspx**.
- You can use Imager Configuration Bar codes to enable or disable symbologies, reset to factory defaults, and set predefined imager modes. For more information, see **"Imager Configuration Bar Codes" on page 86**.

Managing the CN50 Using SmartSystems

SmartSystems™ Foundation is an Intermec software platform that lets you manage all of your SmartSystems-enabled devices simultaneously from a central server. The SmartSystems Console displays all SmartSystems-enabled computers and peripherals in your network.

Through the Console, you can:

- drag-and-drop configuration bundles, OS updates, and firmware upgrades to multiple computers.
- create a "golden" device configuration to use when updating other computers.
- remotely change settings on SmartSystems-enabled computers and peripherals.

With an AutoDeploy license, SmartSystems can automatically push software, configuration settings, and other files to connected CN50s. AutoDeploy can report on asset locations and battery status, making it easier to manage your mobile devices. The license also enables Scan-to-Connect, which makes connecting additional CN50s to your secure wireless network as easy as reading bar codes.

You can download SmartSystems Foundation at no charge from the Intermec web site. For more information on SmartSystems, go to **www.intermec.com/SmartSystems**. To purchase an AutoDeploy license, contact your local Intermec sales representative.

Connecting the CN50 to a PC

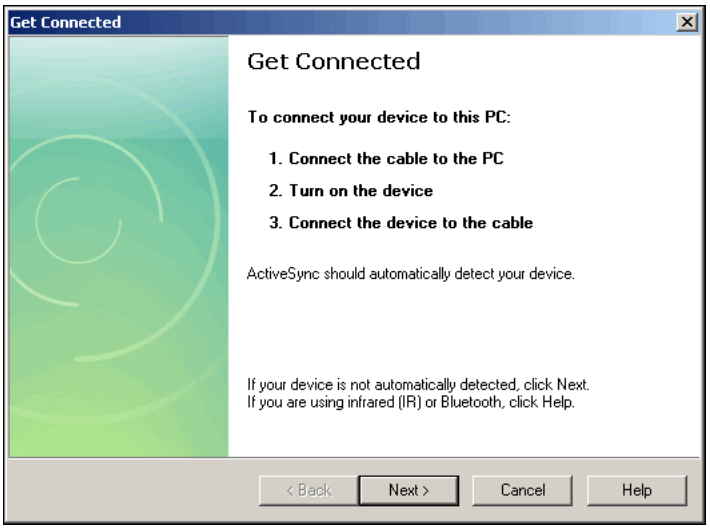
You can use Microsoft ActiveSync to establish a connection between your CN50 and PC. ActiveSync lets you transfer files, synchronize files, remotely debug, and perform other device management activities. ActiveSync is a free application available from the Microsoft web site at **www.windowsmobile.com/getstarted**.

To establish an ActiveSync partnership between your CN50 and PC, you need to physically connect your CN50 to your PC using these accessories:

- CN50 AC adapter
- USB to micro-USB cable

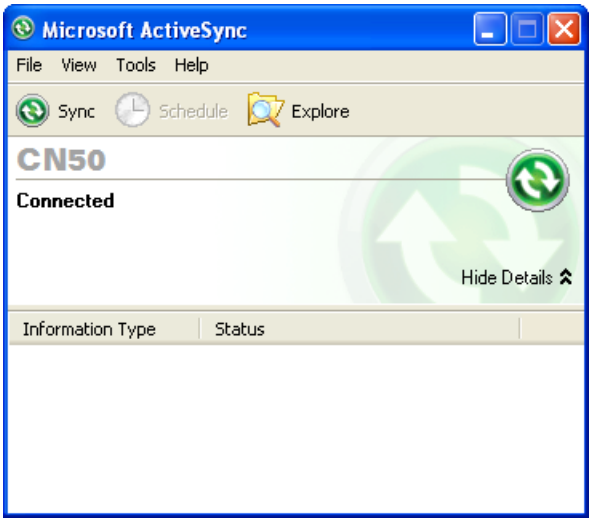
To establish an ActiveSync partnership

1. Download ActiveSync from the Microsoft web site and install ActiveSync on your PC. When installation is complete, the Get Connected dialog box appears.



Get Connected
Get Connected
To connect your device to this PC:
1. Connect the cable to the PC
2. Turn on the device
3. Connect the device to the cable
ActiveSync should automatically detect your device.
If your device is not automatically detected, click Next.
If you are using infrared (IR) or Bluetooth, click Help.
< Back
Next >
Cancel
Help

2 Follow the onscreen instructions to establish a partnership. When the partnership is established, the Microsoft ActiveSync screen appears on your PC.



Connecting the CN50 to Your Network

The CN50 is a versatile mobile computer that you can easily add to your wireless or wired data collection network. You can connect your CN50 using:

- 802.11 radio communications.
- Bluetooth communications.
- Ethernet communications.
- USB communications.

Note: The CN50 radios are disabled when the battery is low. Attach a charger or replace the battery to re-enable the radios.

Connecting the CN50 Using 802.11 Radio Communications

Caution

Make sure all components with antennas are at least 30 cm (1 ft) apart when power is applied. Failure to comply could result in equipment damage.

Your CN50 has an 802.11 radio to transfer data using wireless communications. This section assumes that your wireless network is set up, including your access points.

To configure 802.11 radio parameters

1. Tap **Start** > **Settings** > the **Connections** tab.
2. Tap **Wi-Fi**. The Configure Wireless Network page appears.
3. If the Network you want to connect to is available in the wireless networks list, tap the network name and proceed to Step 4.

   If the Network you want to connect to is not in the wireless networks list:

   a. Tap **Add New**.

   b. In the **Network Name** field, type in the name of your network and then tap **Next**. The Configure Network Authentication page appears.

4. From the **Authentication** list, choose either **Open**, **Shared**, **WPA**, **WPA-PSK**, **WPA2**, or **WPA-PSK**.
   - If you choose **Open** or **Shared**, **Data Encryption** is automatically set to WEP and the key is automatically provided.
   - If you choose **WPA**, Data Encryption is automatically set to **TKIP**.
   - If you choose **WPA2**, Data Encryption should be set to **AES**.
   - If you choose **WPA-PSK**, **Data Encryption** is automatically set to TKIP and you need to enter a **Network key**.
   - If you choose **WPA2-PSK**, **Data Encryption** should be set to AES and you need to enter a **Network key**.
5. Tap **Next**.
6. For **EAP type**, select either **PEAP** or **Smart Card or Certificate** from the list and tap **Finish**. You return to the Configure Wireless Networks page.
7. Tap **Connect**. The CN50 prompts you to enter this network information:
   - User name
   - Password
8. Tap **OK**. Your device connects to the network.
9. Make sure that your CN50 is talking to the network and that the network can see your CN50. If you are connected to the wireless network you will see a connected icon ( ) in navigation bar and you will see the name of your network next to Wi-Fi in the Wireless Manager.

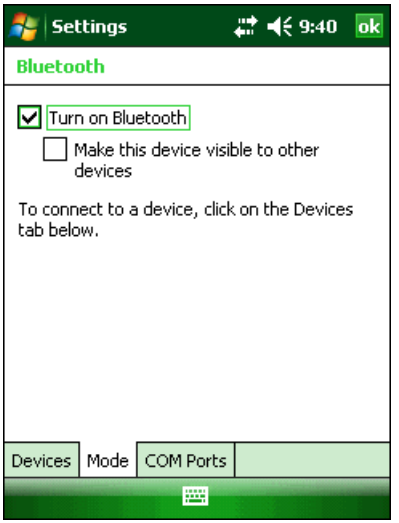
Connecting the CN50 Using Bluetooth Communications

You CN50 is Bluetooth™-enabled, which lets you connect to other Bluetooth devices, such as printers.

You need to turn on the Bluetooth radio before you can discover and connect to other Bluetooth devices. By default, the radio is turned off.

To turn on the Bluetooth radio

1. Tap **Start** > **Settings** > the **Connections** tab > **Bluetooth** > the **Mode** tab.
2. Tap the **Turn on Bluetooth** checkbox.



3. (Optional) If you want your CN50 to be visible to other Bluetooth devices, tap **Make this device visible to other devices**.
4. Tap **ok**.

The Bluetooth radio maintains its current state through a warm or cold boot and maintains virtual COM ports. If you clean boot your CN50, you need to recreate pairings to devices.

Connecting the CN50 to a Wireless Printer

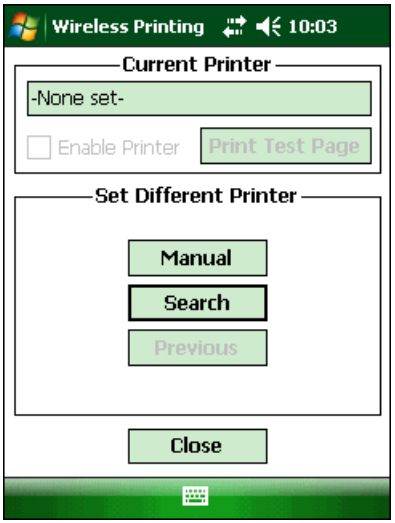
To configure your CN50 for Bluetooth wireless printing, you need to:

- make sure Bluetooth power is on. For help, see the procedure in **"Connecting the CN50 Using Bluetooth Communications" on page 32**.
- create an application that opens the wireless printing COM port on your CN50. For help, see the Bluetooth Resource Kit, which is part of the Intermec Developer Library (IDL), available from the Intermec web site at **www.intermec.com/idl**.

- select the current wireless printer on the CN50. For help, see the next procedure.

To select the current wireless printer

1 Select **Start** > **Settings** > the **System** tab > **Wireless Printing**.



2 Tap **Search** to find a printer, or tap **Manual** to enter a device address. Follow the onscreen instructions to select the current wireless printer.

3 (Optional) Tap **Print Test Page**. The printer prints out the test page.

Note: You can also print wirelessly from inside your applications using Microsoft APIs with Bluetooth extensions for Winsock and Bluetooth virtual COM ports. For help, see the IDL which is available from the Intermec web site at **www.intermec.com/idl**.

Connecting the CN50 Using Ethernet Communications

You connect your CN50 to your Ethernet network with an ethernet cable and an AD24 ethernet multidock.

To use your CN50 in an Ethernet network

1 Connect your CN50 to an ethernet network with an AD24. Ethernet communications is automatically enabled on your CN50.

2 Make sure that your CN50 is communicating with the network. You should see the network connection icon ( ) in the navigation bar.

Connecting the CN50 Using USB Communications

You can use the CN50 AC adapter to transmit data to and receive data from a desktop PC or an Ethernet multidock through USB communications. The USB port supports both USB client and USB host. The port automatically senses the cable you are using and determines which drivers to use. For more information about this accessory and how to order it, see **"Accessories" on page 70**.

Configuring the Phone

The CN50 supports two types of mobile wireless phone technology:

- CDMA
- UMTS

With the radio module installed in the CN50, you can send and receive telephone calls as well as transmit data through wide-area (WAN) cellular networks.

The CN50 provides a phone speaker, microphone, and speakerphone. It also supports the use of a Bluetooth headset or hands-free kit. The factory default setting for the phone is disabled.

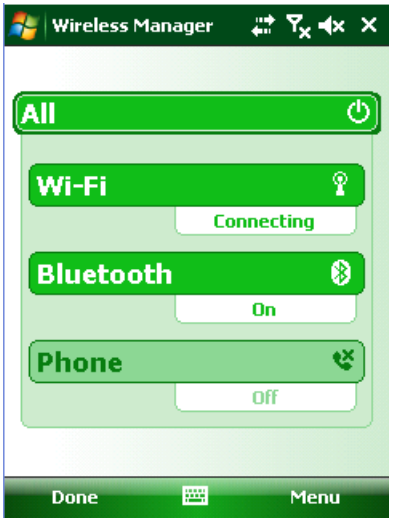
After you have turned on the phone and activated with the wireless carrier of your choice, you can customize the features of the phone and network settings. For help, refer to the online help on your CN50.

Turning On the Phone Using the Wireless Manager

You can use the Wireless Manager to enable and disable Bluetooth, Wi-Fi, and the phone on your CN50.

To turn on the phone using the wireless manager

1 Tap **Start** > **Settings** > the **Connections** tab > **Wireless Manager**.



2 In the Wireless Manager, tap **Phone**. The phone turns on.

3 Tap **Menu** > **Phone Settings** to configure the phone. For help, see the next procedure, "Activating the CDMA Radio."

4 Tap **Done** to close the Wireless Manager.

Activating the CDMA Radio

The CDMA WWAN radio module is configured at the factory. To activate your CDMA CN50 device, you need to contact the carrier you have chosen and set up accounts for each device. Use the following table to view the carriers that Intermec currently supports. If your carrier is not listed in the table, please contact Intermec product support to see if it is now supported.

Currently Supported Carriers

Country	Carriers
United States	Sprint & Verizon

The carrier will require the Mobile Equipment Identifier (MEID) to start the activation process. You can find the MEID:

- on a label located in the upper right corner of the battery compartment.

- on the outside of the CN50 shipping box.

The activation process is slightly different for each CDMA carrier. Your carrier sales contact and an Intermec representative can guide you through the process.

The following table shows the carriers, the correct activation method to use, and the values that you need to activate your phone (if required).

Values Required for CDMA Phone Activation

Carrier	Activation Method	Activation Values You Need
Sprint	Sprint Hands Free	MEID
Verizon	Dial *22899	None - all parameters are automatically transferred wirelessly. You can also use the Activation Wizard with Verizon.

After you complete the activation process, the settings you enter are permanently stored in the CDMA module. Changing the OS or SSPB loads will not affect any of the settings or activation parameters stored in the WAN modem.

To start the Activation Wizard

1. Tap **Start** > **Phone** from the Today screen.
2. In the Phone application, tap **Menu** > **Activation Wizard** from the bottom of the screen.

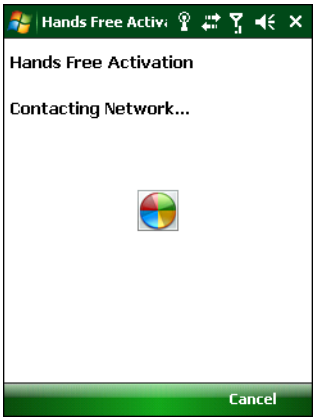
Activating the CN50 on Sprint

Use the following procedure to activate a CN50 programmed for Sprint. Before activating the CN50, you need to set the local date and time.

Note: The CN50 must be activated within 24 hours of contacting Sprint with the MEID.

To activate the CN50 on Sprint

1 In a strong signal area, turn on or reboot the CN50 to automatically start the Hands Free Activation wizard.



2 If activation is unsuccessful on the first attempt, the wizard will countdown from 60 seconds and try again. It will continue this process four times before it stops. At this point, you can reboot the CN50 to retry activation or contact Intermec Support.

Note: You can stop the activation process at anytime by tapping **Cancel**. The wizard will start the process again the next time you boot up the CN50.

3 The wizard states when the activation is successful. You can test the service by navigating to a web site or making a phone call.

Activating the CN50 on Verizon

Use the following procedures to activate a CN50 programmed for Verizon. The voice service must be activated before you can activate the data service.

To activate the voice service

1 Dial ***228** to initialize the Verizon programming.

2 Dial **1** when prompted to complete the process.

This will activate the voice service on the CN50 and program the phone number into the cell phone.

3 A popup box will state when the programming is successful. When you close the popup box, the phone will reset.

To activate the data service

1 Tap **Start** > **Settings** > **Connections** and tap the **Connection icon**.

2 Tap **Manage existing connections**.

3 Select the **InternetPPP #777** and choose **Edit**.

4 Confirm that the Connection name is correct and then tap **Next**.

5 In the **Enter the Number to dial** box, enter `#777` and tap **Next**.

6 Enter your username: `<10_digit_#>@vzw3g.com`.

Where <10_digit_#> is your actual 10 digit phone number. For example, 8005551212@vzw3g.com. To determine your phone number, go to the phone application and tap **Menu** > **Options**.

7 Enter the password: `vzw` (case-sensitive).

8 Tap **Finish**.

You can test the data service by navigating to a web site using Internet Explorer.

Activating the UMTS Radio

You use a SIM card to activate the UMTS/HSPA phone on the CN50. You can purchase the SIM card from your network provider. You insert the SIM card in the battery cavity on the back of the CN50.

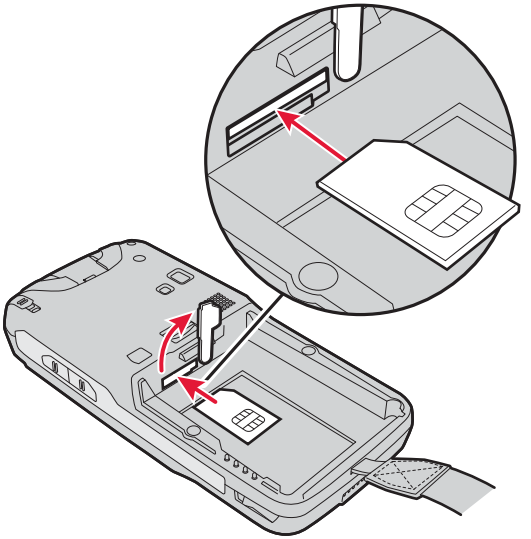
To install the SIM card

1 Press ⏻ to turn off the CN50.

2 Disconnect the handstrap from the top of the CN50.

3 Push forward on the battery release tab until the battery releases, and then lift the battery away from the CN50.

4 Swing the card access door clockwise to expose the SIM card and microSD card slots.



5 Insert the SIM card into the top slot until it clicks in place.

6 Close the card access door.

7 Insert the battery and press down until it clicks in place. Reconnect the handstrap.

8 Press ⏻ to turn on the CN50.

Making a Phone Call

After you activate your phone, you are ready to start making phone calls. The icon in the navigation bar will change to indicate that the radio is now active.

To make a phone call

1 Tap **Start** > **Phone**.

2 Tap the keys to enter the telephone number you want to call.

3 Tap the **Talk** button.

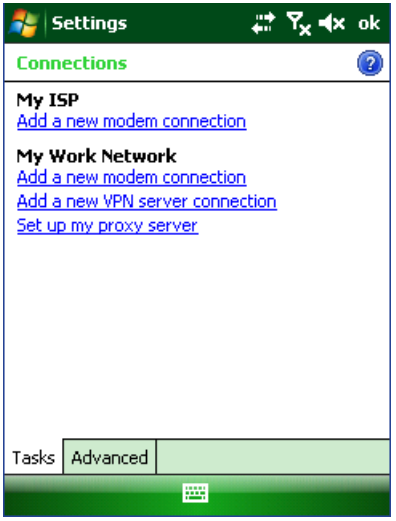
Connecting to an ISP

You can connect to your Internet Service Provider (ISP), and use the connection to send and receive e-mail messages and view web pages. Get an ISP dial-up access telephone number, a user name, and a password from your ISP.

Tap the **Help** icon at any time to view additional information for the wizard or the settings.

To connect to an Internet service provider

1. Tap **Start** > **Settings** > **Connections** tab > **Connections**.
2. Under My ISP, tap **Add a new modem connection**.



3. Enter a name for the connection, such as "ISP Connection."
4. If using an external modem connected to your CN50 with a cable, select **Hayes Compatible on COM1** from the Select a modem drop-down list.
5. Tap **Next**.
6. Enter the access phone number and then tap **Next**.
7. Enter the **User name**, **Password**, and **Domain** (if provided by an ISP or your network administrator).
8. Tap **Finish**.

9. Tap the **Advanced** tab from the Connections screen and then tap **Dialing Rules**.
10. Select **Use dialing rules**, tap **ok** at the dialog box, and then tap **Edit**.
11. Specify your current phone type and then tap **ok** until you exit and return to the Settings page.

Once the CN50 is connected, you can:

- send and receive message by using Messaging (Outlook E-mail).
- visit web pages by using Internet Explorer Mobile.

Connecting to a Network With a VPN Server

A VPN connection helps you to securely connect to servers, such as a corporate network, through the Internet. Before you can make a VPN connection, you will need the following items from your network administrator:

- User name
- Password
- Domain name
- TCP/IP settings
- Host name or IP address of the VPN server

To create a VPN server connection to work

1. Tap **Start** > **Settings** > **Connections**.
2. Under My Work Network, tap **Add a new VPN server connection**.
3. In the **Name** field, enter a name for the connection, such as your company name.
4. In the **Host name / IP** field, enter the VPN server name or IP address.
5. Select the **VPN type** of authentication to use with your CN50. If you are not sure which option to choose, check with your network administrator.
6. Tap **Next**.

7 Select a way for the CN50 to authenticate the connection. If you select **A pre-shared key**, enter the key provided by your network administrator.

8 Click **Next**.

9 Enter the **User name**, **Password**, and **Domain** (if provided by an ISP or your network administrator).

10 Tap **Finish**.

3

Developing and Installing Applications

Use this chapter to understand the guidelines for developing applications for use on the CN50. This chapter contains these sections:

- **Developing Applications for the Computer**
- **Installing Applications on the CN50**
- **Updating the System Software**

Developing Applications for the Computer

Use the Intermec Resource Kits to develop new applications to run on the CN50. The Resource Kits are a library of components grouped by functionality that you can use to create applications for the computer. The Resource Kits are part of the Intermec Developer Library (IDL), and you can download them from the Intermec web site at **www.intermec.com/idl**.

To use the Resource Kits, you need Microsoft Windows Mobile SDK and Microsoft Visual Studio 2005. For more information on IDL, see the ***Intermec Developer Library Resource Kit Developer's Guide***.

Installing Applications on the CN50

There are several ways you can install applications on your mobile computer:

- You can package your application as a cabinet (.cab) file.
- If you have a simple application, you may only need to deliver the .exe file.
- You can copy a directory structure that contains the application, supporting files, DLLs, images, and data files.

Intermec recommends using .cab files to install your applications. The mobile computer uses standard Windows Mobile .cab files and will install third-party .cab files. You can have your .cab files place your application in any of these memory locations on the mobile computer:

- The Object Store.
- The optional microSD card. Depending on available disk space, you may want to consider installing you application files on the microSD card. Using a microSD card creates the Storage Card folder on the CN50.
- The non-volatile Flash File Store. Applications and data in the Flash File Store will persist through a clean boot. Since the flash in the system has a limited number of write cycles, do not use the Flash File Store for excessive writing.

Files copied to any of these locations are safe when you cold boot the computer as long as the AutoRun system is installed in the appropriate location. You can find information about this system in the ***Intermec Developer Library Resource Kit Developer's Guide*** which is available from **www.intermec.com/idl**. When you copy a .cab file to the \CabFiles folder, the folder automatically extracts that .cab file on every cold boot.

There are several ways you can install files and applications on the CN50:

- SmartSystems console
- ActiveSync
- Scan to Load hands-free software loading function of SmartSystems Foundation
- microSD card

The following sections explain how to use each one of these processes to install your application on the computer.

Installing Applications Using SmartSystems Foundation

Your CN50 is SmartSystems-enabled, which lets you use the SmartSystems console to install Intermec applications on your CN50. The console is part of SmartSystems Foundation. For more information, go to the Intermec web site at **www.intermec.com/SmartSystems**.

To install an application using the SmartSystems console

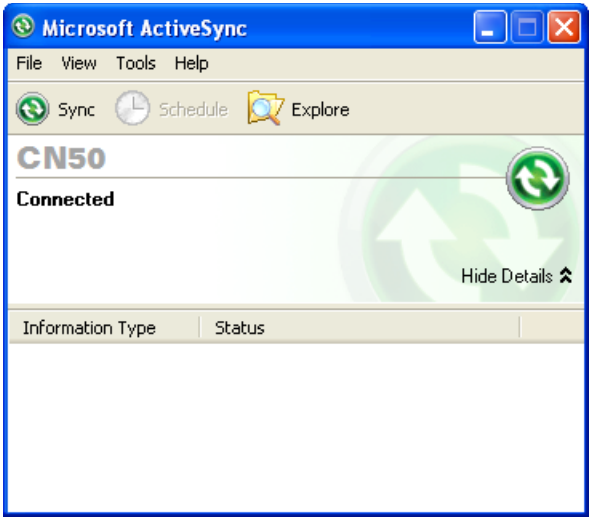
1. Download the application to your PC.
2. Double-click the application. The application appears in the SmartSystems console in the Software Vault.
3. Drag the application to each CN50 in your network or to a group of CN50s in a folder.

Installing Applications Using Microsoft ActiveSync

You can send applications from your PC to your CN50 using Microsoft ActiveSync. To download ActiveSync or the Windows Mobility Center, go to **www.windowsmobile.com/getstarted**.

To install an application using Microsoft ActiveSync

1. On your PC, copy the .cab file you want to download to your CN50.
2. Create an ActiveSync connection between your PC and CN50. For help, see **"Connecting the CN50 to a PC" on page 29**.



3. Click **Explore**. The Mobile Device window opens.
4. Double-click **My Windows Mobile-Based Device**.
5. Navigate to the folder you want to copy the .cab file to, and paste the .cab file in the folder.
6. On your CN50, tap **Start** > **Programs** > **File Explorer** and navigate to the location of the .cab file.
7. Tap the .cab file to install it.

Installing Applications Using a Scan-to-Connect Bar Code

You can use the Scan-to-Connect function in SmartSystems Foundation to create a bar code that loads software. The bar code contains the address of the server where the software to download is located. Once you scan the bar code, it finds the server, downloads the file, and installs it on the mobile computer. For more information on installing applications using a Scan-to-Connect bar code, see the SmartSystems Foundation Help.

Installing Applications Using a microSD Card

You can also use a microSD card to install applications.

To install applications using the microSD card

1. Suspend the CN50 and remove the microSD card.
2. Insert the microSD card into a microSD adapter card and then place it in the storage card reader connected to your PC.
3. Copy your application file to the microSD card.
4. Remove the microSD card from the adapter card and insert it into the CN50.
5. On your CN50, navigate to the storage card folder and run your application.

Updating the System Software

The CN50 uses Image Update to update the operating system (OS) and system software. Image Update uses packages to allow for smaller and faster updates because the contents are stored in ROM. Packages persist through a cold or clean boot and cannot be removed by the end user. The Image Update process also provides strengthened security because all packages are signed.

Image Update packages (.pkg or .pks files) may contain elements such as DLLs, executable (.exe) files, and .cab files.

You can use either of these mechanisms for updating your CN50:

- You can update multiple computers at the same time using the SmartSystems Console. For help, see the next section, "**Updating Multiple CN50s Using SmartSystems Console**."
- You can update individual computers by transferring the packages to the CN50 and then installing them from the CN50.

If you are using SmartSystems to update the CN50, you can choose to send the updates silently. For more information, see **"Sending Silent Update Packages to the CN50" on page 51**.

Updating Multiple CN50s Using SmartSystems Console

You can use the SmartSystems console to update the operating system or system software on your CN50. The console is part of SmartSystems Foundation and is available from the Intermec web site through the Intermec Developer Library (IDL). Before you can upgrade your CN50, you need:

- SmartSystems Foundation. To download SmartSystems Foundation, go to **www.intermec.com/idl** and open the Device Management page.
- the SmartSystems bundles you want to install. The SmartSystems bundle contains the Image Update package file. These SmartSystems bundles are available from the Intermec web site at **www.intermec.com**. Go to **Support** > **Downloads**.

To update the CN50 using SmartSystems Foundation

1. Open the SmartSystems console.
2. Make sure the SmartSystems console and CN50 are on the same subnet and connected wirelessly or through Ethernet.
3. Make sure your CN50 is either in a communications dock or charging dock or that power management is disabled.
4. Download the SmartSysterms bundle to your PC.
5. Double-click the SmartSystems bundle on your PC to extract the update files to the software vault.
6. From the SmartSystems console, locate the bundle(s) to install.
7. Drag the application to each CN50 you want to update or to a group of CN50s in a folder. The SmartSystems console installs the update on your computers.
8. After the download is complete, your CN50 begins the update process and automatically performs a cold boot.

   The CN50 then boots into a special Update Loader mode where the computer has no connections and is completely unusable. This

process can take anywhere from 30 seconds to 15 minutes depending on the update.

Note: The SmartSystems console indicates that your CN50 is offline, by displaying a red stop sign symbol, until the CN50 reboots and reconnects to the system.

9 After the update is complete, the CN50 cold boots again. When a confirmation dialog box appears requesting user input, dismiss it.

Sending Silent Update Packages to the CN50

If you want to automatically download and send update packages to your computers, you can purchase a SmartSystems AutoDeploy License. The silent updates do not require any user intervention and begin when you choose to have the update process start. SmartSystems Foundation users are notified when update packages are released so that they can download them and update their Intermec computers. For more information, see the SmartSystems Foundation Help.

Updating Individual CN50s

You can download update packages from your PC to the CN50 using Microsoft ActiveSync or any other file transfer method you choose. If you need to download ActiveSync or the Windows Mobility Center, go to **www.windowsmobile.com/getstarted**.

To update an individual CN50

1 Download the Image Update packages you want to install from the Intermec web site at **www.intermec.com**. Go to **Support** > **Downloads**.

2 Transfer the Image Update packages from your PC to the CN50.

3 On your CN50, tap **Start** > **Programs** > **File Explorer** and navigate to the location of the Image Update package.

4 Double-tap the package to install it. Your CN50 begins the update process and automatically performs a cold boot.

The CN50 boots into a special Update Loader mode where the computer has no connections and is completely unusable. This process can take anywhere from 30 seconds to 15 minutes depending on the update.

5 After the update is complete, the CN50 cold boots again. When a confirmation dialog box appears requesting user input, dismiss it.

4

Troubleshooting and Maintaining the CN50

If you encounter any problems while using the mobile computer, look in this chapter to find a possible solution. You will also find information on routine maintenance. This chapter contains these sections:

- **Calling Product Support**
- **Troubleshooting the CN50**
- **Resetting the CN50**
- **Cleaning the CN50**

Calling Product Support

If you cannot find the answer to your problem in the "Troubleshooting the CN50" section, you can visit the Intermec technical knowledge base (Knowledge Central) at **intermec.custhelp.com** to review technical information or to request technical support. If you still need help after visiting Knowledge Central, you may need to call Product Support.

To talk to an Intermec Product Support representative, call

1-800-755-5505.

Before you call Intermec Product Support, make sure you have the following information ready:

- Configuration number
- Serial number
- Firmware and software version numbers
- Know the language your custom application was written in and the tools you used to create it

Consult your application developer for information on your custom application.

To find your configuration number and serial number

- Look at the CN (configuration number) and SN (serial number) fields on the label inside the battery compartment.

To find software and firmware version numbers

1. Go to **Start** > **Settings** > **About.**
2. Tap the **Packages** tab to find software version numbers.
3. Tap the **Build** tab to find the firmware version.

Troubleshooting the CN50

Use this section to troubleshoot some common problems you may experience with your CN50.

Note: If you send the CN50 in for service, it is your responsibility to save the computer data and configuration. Intermec is responsible only for ensuring that the hardware matches the original configuration when repairing or replacing the computer.

Problems While Configuring the CN50

Problem	Possible Solution
You cannot type a character on the keypad or you can only type uppercase or lowercase letters.	You may have locked a modifier key on the keypad. Press the necessary key sequence to unlock the key. For help, see **"Using the Keypad " on page 8**.
You press ⏻ and nothing happens.	• Make sure the backlight is on. • Make sure you have a charged battery that is installed correctly. For help, see **"Charging the Battery" on page 4**. • The battery may be discharged. Replace the battery with a spare charged battery, or charge the battery. • Reset the CN50. For help, see **"Resetting the CN50" on page 60**.
You insert a microSD card and cannot find the SDMMC Disk folder on the CN50.	• The microSD card may not be installed correctly. Insert the microSD card as described in Steps 2 through 4 of **"Using a microSD Card" on page 22**. • The microSD card may be damaged. Try another microSD card.
The Battery status LED is on.	• If the battery status LED is a steady green, the battery is more than 95% charged and computer is on a charger. • If the battery status LED is blinking red, then the battery is low. Replace or charge the battery. • If the battery status LED is a steady red, the main battery is on charge.

Problems While Configuring the CN50

Problem	Possible Solution
The computer appears to be locked up and you cannot enter data.	• Press and hold the power key to turn off the CN50, and then press the power key again to turn it on. • Cold boot the CN50. For help, see **"Cold Booting the CN50" on page 60**. • Try reloading the firmware. For help, see **"Updating the System Software" on page 49**. • If the CN50 does not boot or reset, contact your Intermec representative for help.
You tap the screen and nothing happens.	• Align your screen. For help, see **"Aligning the Touch Screen" on page 14**. • Make sure the CN50 is not locked.

Problems With Wireless Connectivity

Problem	Possible Solution
The CN50 is connected to the network, and you move to a new site to collect data. Now, your CN50 is not connected to the network.	Move closer to an access point or to a different location to reestablish communications until you reconnect with the network. Any data collected while the CN50 is out of range is transmitted over the network once the network reconnects.
The CN50 appears to be connected to the network, but the host computer is not receiving any information from the CN50.	There may be a problem with the connection between the access point and the host computer. Check with network administrator or use your access point user's manual.

Problems While Configuring 802.1x Security

Problem	Possible Solution
The CN50 indicates that it is authenticated, but it does not communicate with the host.	Make sure the CN50 IP address, host IP address, subnet mask, default router are configured for the network.
The CN50 does not appear to be authenticating and a network connection icon does not appear on the toolbar.	• The CN50 may not be communicating with the access point. Make sure the CN50 network name matches the access point network name (SSID). • The 802.1x security network may not be active. Make sure the server software is properly loaded and configured on the server PC. See server software documentation for help.
A network connection icon appears in the toolbar, but then disappears.	• The CN50 may not be communicating with the intended access point. Make sure the CN50 network name matches the access point network name. • The access point may not be communicating with the server. Ensure the access point is turned on, properly configured, and has 802.1x security enabled.
You are setting up multiple access points in a network, with different SSIDs, and the connection fails.	When you change the SSID, the WEP key values are not saved. Configure the WEP key values and save your changes.

Problems While Configuring 802.1x Security (continued)

Problem	Possible Solution
The CN50 indicates it is not authenticated.	Make sure that: • the User Name and Password parameters on the CN50 match the user name and password on the authentication server. You may need to configure the password on both the CN50 and the authentication server. • on your authentication server, the user and group are allowed and the group policy is allowed to log into the server. For help, see the documentation that shipped with your authentication server software. • the IP address and secret key for the access point match the IP address and secret key on the authentication server. You may need to configure the IP address and secret key on both your access point and authentication server. • the authentication server software is running on the server PC.
You clean boot the CN50 and this message appears, "The server certificate has expired or your system date is incorrect."	When you clean boot the CN50, the date and time are not saved. Configure the date and time and save your changes.

Problems While Scanning Bar Codes

Problem	Possible Solution
You press the **Scan** button, but you cannot see a red beam of light.	• You may be too far away from the bar code label. Try moving closer to the bar code label and scan it again. • You may be scanning the bar code label "straight on." Change the scanning angle and try again. • Move within two feet of a wall to test the effective scan of the scanner. For help scanning bar codes, see **"Reading Bar Codes" on page 17**.

Problems While Scanning Bar Codes (continued)

Problem	Possible Solution
When you release **Scan** button, the Good Read LED does not turn off.	If the CN50 is configured to use continuous/edge triggering, the Good Read LED stays on. If the CN50 is configured to use level triggering, there may be a problem. Press the **Scan** button again without scanning a bar code label. If the LED is still on, contact your local Intermec representative.
The scanner does not read the bar code label.	• Aim the scanning beam so that it crosses the entire bar code label in one pass. Try changing the scan angle. • Check the quality of the bar code label, Scan a bar code label that you know scans well. Compare the two bar code labels to see if the bar code quality is too low. You may need to replace the label that you cannot scan. • Make sure the bar code symbology is enabled. For help, see the Data Collection Resource Kit which is part of IDL. You can download the resource kit from **www.intermec.com/idl**. • Make sure the application is accepting input by scanning a bar code. You may need to type this information instead.
The scanner does not read the bar code labels quickly, or the scanning beam seems to be faint or obscured.	The scanner window may be dirty. Clean the window with a solution of ammonia and water. Wipe dry. Do not allow abrasive material to touch the window.
The scanned bar code data that appears in your application does not match the data encoded in the bar code label.	The CN50 may have decoded the bar code label in a different bar code symbology. Try scanning the bar code label again. Make sure you scan the entire label.

Resetting the CN50

You rarely need to reset the computer. If the computer does not resume after pressing the ⏻ button, or if the computer or an application lock up, you may need to reset the CN50. The CN50 uses the configuration currently saved in flash memory during the boot process. There are three ways to reset the CN50:

- Warm booting
- Cold booting
- Clean booting

Warm Booting the CN50

You may need to perform a warm boot to correct conditions where an application stops responding to the system.

To warm boot the CN50

- Go to **Start** > **Programs** > **Shut Down**. The CN50 systematically shuts down.

The computer goes through the initialization process and restarts.

Cold Booting the CN50

In some cases where the computer completely stops responding, it may be necessary to perform a cold boot. Because cold booting may result in data loss, only use this method if all other recovery methods have failed.

Note: Cold booting the CN50 does not guarantee that cached disk data will be saved, so transactional data may be lost during the reset. All other data is preserved.

To cold boot your CN50

1. Remove the battery pack from the CN50 and wait 30 seconds.
2. Reinsert the battery pack and press ⏻.

Clean Booting the CN50

If the CN50 does not warm boot or cold boot, you may need to perform a clean boot. When you clean boot the CN50, the CN50 only loads files and applications that are absolutely required by the operating system. A clean boot returns the CN50 to an "out of the box" or factory default state, so that you can run diagnostic tests to troubleshoot the normal boot process.

The clean boot process erases the CN50 memory, including all applications and data files in the object store. To preserve applications through a clean boot, store them in the Flash File Store. For more information, see "Installing Applications on the CN50" on page 46.

To clean boot the CN50

1. Remove the battery pack.
2. Reinsert the battery pack and press ①.
3. When the CN50 starts the boot process, simultaneously press ◄ and ► until the IPL Boot Configuration Menu appears on the screen.

```
IPL Boot Configuration Menu
---------------------------
(1) Force Image Update: No
(2) Force Clean Boot  : No
(3) Passive KITL      : No
(0) Continue with Boot...
```

4. Press 2 to select **Force Clean Boot** and then press 0 to select **Continue with Boot**.

   The CN50 executes the clean boot. This process takes a few minutes.
5. When prompted, tap the screen to set up the CN50.
6. Follow the instructions to calibrate the screen.

Cleaning the CN50

To keep the CN50 in good working order, you may need to perform these minor maintenance tasks:

- Clean the scanner window.
- Clean the CN50 screen.

Clean the scanner window and CN50 screen as often as needed for the environment in which you are using the computer. To clean the CN50, use a solution of one part ammonia and 3 parts water.

There are no user-serviceable parts inside the CN50. Opening the unit will void the warranty and may cause damage to the internal components.

To clean the scanner window and computer screen

1. Press ⏻ to turn off the CN50.
2. Dip a clean towel or rag in the ammonia solution and wring out the excess. Wipe off the scanner window and screen. Do not allow any abrasive material to touch these surfaces.
3. Wipe dry.

A
Specifications

Physical and Environmental Specifications

Physical Dimensions

Length:	15 cm (5.9 in)
Width (at widest part):	7 cm (2.75 in)
Height (at tallest part):	2.5 cm (1 in)
Weight:	285 g (10 oz)

Power and Electrical Specifications

Operating:	Rechargeable lithium-ion battery
Battery capacity:	1950 mAh (7.2 Wh) (AB24) 3900 mAh (14.4 Wh) (AB25)
Electrical rating:	4,65 V, 3A

Temperature and Humidity Specifications

Operating temperature:	-10°C to 50°C (14°F to 122°F)
Storage temperature:	-20°C to 60°C (-4°F to 140°F)
Charging temperature:	0°C to 45°C (32°F to 113°F)
Relative humidity (operating):	5 to 95% non-condensing
Environmental rating:	IP54

Screen Specifications

- 240 RGB x 320 pixels
- 8.9 cm (3.52 in) diagonal square active area, ¼ VGA
- LED backlight with 5 levels of brightness
- LCD capable of both portrait and landscape operation

Keypad Options

- Numeric keypad
- Alphanumeric keypad (QWERTY)

Bar Code Symbologies

The EA21and EA11 imager supports all of the bar code symbologies listed in the next table.

• AustraliaPost	• GS1 DataBar Omnidirectional
• Aztec	• Infomail
• BPO (British Post 4-state)	• Interleaved 2 of 5
• ChinaPost	• JapanPost
• CanadaPost	• KoreanPost
• Codabar	• Matrix 2 of 5
• Codablock A	• Maxicode
• Codablock F	• Micro PDF417
• Code 11	• MSI
• Code 39	• PDF417
• Code 93	• Planet
• Code 128/GS1-128	• Plessey
• DataMatrix	• Postnet
• DutchPost	• QR Code
• EAN/UPC	• Standard 2 of 5
• GS1 Composite	• SwedenPost
• GS1 DataBar Expanded	• Telepen
• GS1 DataBar Limited	• TLC 39

CN50 Imager Reading Distances

Typical reading distances are done in an office environment using office lights (4 lux). Minimum distances are measured in the dark (0 lux). Both reading distances are provided in respective scan engine integration guides. Contact your local Intermec representative for more information.

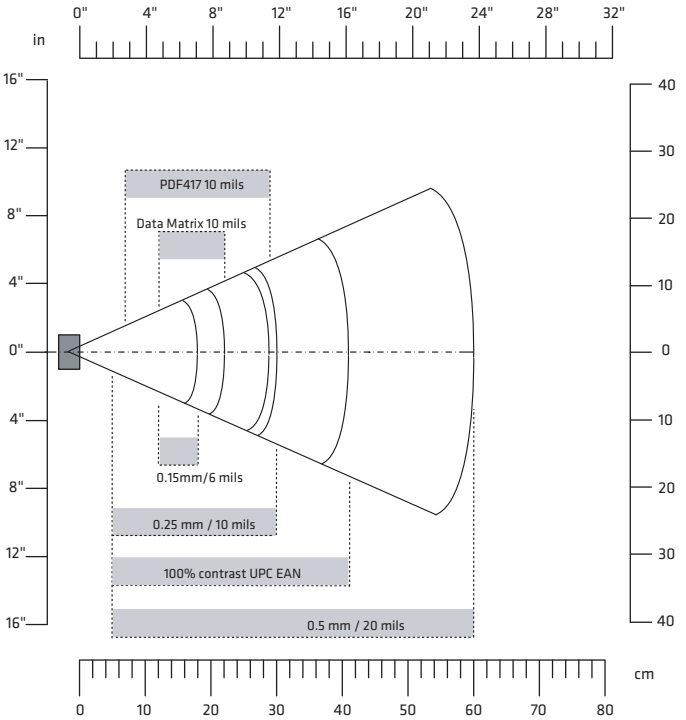
Below are the typical and minimum standard reading distances for the CN50 built with an EA21 or EA11 imager. When correctly mounted, and exit window reduces reading distances by about 4% for all scan engines.

Note: Minimum distances depend on the length of the bar code.

EA21 Imager Reading Distances

EA21 Typical Reading Distances

Symbology	Density	Minimum Distance	Maximum Distance
Code 39	0.15 mm /6 mils	12 cm/4.72 in	18 cm/7.09 in
	0.2 mm/10 mils	5 cm/1.97 in	30 cm/11.81 in
	0.5 mm/20 mils	5 cm/1.97 in	60 cm/23.62 in
	1 mm/40 mils	9 cm/3.54 in	95 cm/37.40 in
UPC/EAN 100%	0.33 mm/13 mils	5 cm/1.97 in	41 cm/16.14 in
DataMatrix	0.25 mm/10 mils	12 cm/4.72 in	22 cm/8.66 in
	0.38 mm/15 mils	8 cm/3.15 in	35 cm/13.78 in
PDF417	0.25 mm/10 mils	7 cm/2.75 in	29 cm/11.42 in
	0.38 mm/15 mils	7 cm/2.75 in	44 cm/17.32 in



EA21 Typical Reading Distances

EA21 Minimum Reading Distances

Symbology	Density	Minimum Distance	Maximum Distance
Code 39	0.15 mm /6 mils	12 cm/4.72 in	18 cm/7.09 in
	0.25 mm/10 mils	5 cm/1.97 in	28 cm/11.02 in
	0.5 mm/20 mils	5 cm/1.97 in	55 cm/21.65 in
Code 39 (cont.)	1 mm/40 mils	9 cm/3.54 in	75 cm/29.53 in

EA11 Standard Minimum Reading Distances

CN50 Docking Connector Specifications

The CN50 has an array of six pin surface contacts that provide USB "On the Go" (OTG) connectivity and charge power.

CN50 Docking Connector Specifications

Pin Number	Signal Name	Description
1	VEXT	Computer power (4.6 V @ 1.5 A)
2	OTG_ID	Identification pin
3	OTG_VBUS	VBUS (5V @ 100 mA max)
4	OTG_USB_D-	USB data signal
5	OTG_USB_D+	USB data signal
6	GND	Ground (power return)

Accessories

You can use these accessories (sold and ordered separately) with the CN50. To order accessories, contact your local Intermec sales representative.

Battery (AB24, AB25)

The AB24 standard battery and AB25 extended battery provide main power to the CN50.

Quad Charger (AC21)

The AC21 quad charger charges up to four CN50 batteries at one time.

Ethernet Multidock (AD24)

The AD24 ethernet multidock provides ethernet connectivity and power to up to four CN50 computers at one time.

Charge-Only Multidock (AD23)

The AD23 charge-only multidock provides power for up to four CN50 computers at one time.

Vehicle Holder

Use the vehicle holder to hold your CN50 while you are using it in a vehicle.

Vehicle Power Adapter (AE36)

Use the AE36 vehicle power adapter to provide power to your CN50 from your vehicle.

AC Power Adapter (AE37)

Use the AC power adapter to provide power to your CN50 from an external power supply. The AC power adapter also has a micro-USB connector you can use to connect the CN50 to a USB port on your desktop PC.

B

Default Settings

Default Configuration

The following tables list the default values of the configuration commands supported on the CN50. If you restore the CN50 to factory default settings, the CN50 uses these values.

The commands are grouped by function and reflect the organization of Intermec Settings. You can configure your CN50 with Intermec Settings from the SmartSystems Foundation console. For detailed information on most of the commands, see the ***Intermec Settings Command Reference Manual***.

Keypads and Keystrokes

Standard Characters

Use the following tables to learn how to enter standard and hidden characters and functions with the keypad.

Alphanumeric Characters

Character	QWERTY Keypad	Numeric Keypad
a	A	2
b	B	2 2
c	C	2 2 2
d	D	3
e	E	3 3
f	F	3 3 3
g	G	4
h	H	4 4
i	I	4 4 4
j	J	5
k	K	5 5
l	L	5 5 5
m	M	6
n	N	6 6
o	O	6 6 6
p	P	7
q	Q	7 7
r	R	7 7 7
s	S	7 7 7 7
t	T	8
u	U	8 8
v	V	8 8 8
w	W	9
x	X	9 9

Alphanumeric Characters (continued)

Character	QWERTY Keypad	Numeric Keypad
y	Y	9 9 9
z	Z	9 9 9 9
A	⇧ A	1 2
B	⇧ B	1 2 2
C	⇧ C	1 2 2 2
D	⇧ D	1 3
E	⇧ E	1 3 3
F	⇧ F	1 3 3 3
G	⇧ G	1 4
H	⇧ H	1 4 4
I	⇧ I	1 4 4 4
J	⇧ J	1 5
K	⇧ K	1 5 5
L	⇧ L	1 5 5 5
M	⇧ M	1 6
N	⇧ N	1 6 6
O	⇧ O	1 6 6 6
P	⇧ P	1 7
Q	⇧ Q	1 7 7
R	⇧ R	1 7 7 7
S	⇧ S	1 7 7 7 7
T	⇧ T	1 8
U	⇧ U	1 8 8
V	⇧ V	1 8 8 8
W	⇧ W	1 9
X	⇧ X	1 9 9
Y	⇧ Y	1 9 9 9
Z	⇧ Z	1 9 9 9 9

Alphanumeric Characters (continued)

Character	QWERTY Keypad	Numeric Keypad
0	Blue + Sym	0
1	Blue + Y	1
2	Blue + U	2
3	Blue + I	3
4	Blue + H	4
5	Blue + J	5
6	Blue + K	6
7	Blue + B	7
8	Blue + N	8
9	Blue + M	9

Characters and Functions

Function	QWERTY Keypad	Numeric Keypad
Forward Tab	Tab	Tab
Back Tab	Blue + Tab	Blue + Tab
Space	Space	Orange + 0
Backspace	←	←
Shift	↑	Blue or Orange
Caps Lock	Blue + ↑	Orange + 1
Up Arrow	↑	↑
Down Arrow	↓	↓
Left Arrow	Blue + <	Blue + <
Right Arrow	Blue + >	Blue + >
!	Blue + O	Not available
@	Blue + Q	Not available
#	Blue + V	#
$	Blue + E	Not available
%	Blue + R	Not available

Characters and Functions (continued)

Function	QWERTY Keypad	Numeric Keypad
&	Blue S	Not available
*	Blue C	*
+	Blue T	Blue #
ok	Blue P	Orange #
-	Blue G	Blue *
Start (Windows)	Blue W	Orange *
?	Blue A	Not available
:	Blue D	Not available
/	Blue F	Not available
=	Blue L	Not available
‘ (apostrophe)	Blue Z	Not available
, (comma)	Blue X	Not available
. (period)	.	.
Esc	Esc	Esc

Imager Configuration Bar Codes

Imager Configuration Bar Codes

Use the following bar codes to quickly configure the CN50 imager. These bar codes allow you to enable or disable symbologies, reset to factory defaults, and set predefined imager modes.

If you need to create a bar code for a specific setup, please download a free copy of EasySet from the CN50 page on the Intermec web site at **www.intermec.com.**

Basic Configuration Bar Codes

Command	Bar Code
Disable all symbologies	
Reset to Factory Defaults	
Postamble with Carriage Return and Line Feed	

Imager Predefined Modes

Command	Bar Code
1D codes only	Standard 1D and 2D codes	

Imager Predefined Modes (continued)

Command	Bar Code
1D and 2D codes bright environment	
1D and 2D codes with reflective surface	

Symbology Bar Codes

Symbology	Enable Bar Code	Disable Bar Code
AustraliaPost		
Aztec		
BPO		
CanadaPost		
Codabar		

Symbology Bar Codes (continued)

Symbology	Enable Bar Code	Disable Bar Code
Code 11		
Code 39		
Code 93		
Code 128		DataMatrix		
DutchPost		
EAN 8		
EAN 13		

Symbology Bar Codes (continued)

Symbology	Enable Bar Code	Disable Bar Code
GS1 128		Interleaved 2 of 5		JapanPost		Matrix 2 of 5		MaxiCode		Micro PDF417		MSI Code		PDF417		
Symbology Bar Codes (continued)

Symbology	Enable Bar Code	Disable Bar Code
Planet		
Plessey Code		
Postnet		
QR Code		
Standard 2 of 5		
Telepen		TLC 39		
UPC-A		

Symbology Bar Codes (continued)

Symbology	Enable Bar Code	Disable Bar Code
UPC-E		UPC-E1
